

Example of how 3/4 inch pin should look.

There are four art works supplied in folder. This color example pdf (fonts converted to line). The Pin artwork in ai and in PDF (fonts converted to lines) and the Logo artwork in ai. The center logo is supplied in case you need to work with this for dike thickness.

Gold is raised metal dike and letters. Black and white are fill materials.

Note: This is our first pin artwork. We were not given specifications on dike thickness or fonts that will be compatible with your manufacturing techniques.

Note: Do not let ink dikes close this gap. I'd prefer dike barrier to extend inward from object edges.
